Agreements with Yossi Salat

1. The system doesn't track the staff, and therefore a staff member is generic, and known only by position (for example, no distinction between "Roi the waiter" and "Gal the watier").
2. Menu is fixed in advance, and includes all variations of dishes (for example "pizza" is already in menu, including price for all different variations and toppings).
   If there is a change in menu, Yossi, as the manager, will have to update the system.
3. Yossi required quick ordering, therefore we agreed that placing an order a certain dish will take no more than 5 step, and will be done with a touch screen device.
4. If a certain dish was ordered, but cannot be prepared - all other dishes will be ordered without waiting for the change in order, in order to save time.
5. The system doesn't keep track of the ingredients and the needed ingredients of the dishes, but will be aware if a certain dish cannot be made (due to missing ingredients or any other reason). This status will be updated by a "post" employee.
6. If a dish is ordered but cannot be made, the system will not keep track of it.
7. The system provides a set of pre-decided statistics reports. New kind of reports cannot be created.
8. The system's statistics GUI will have a simple "commonly used" report creation for 2 options: busy hours report and items popularity report.
9. The system is not aware of the restaurant capacity and available tables. It tracks seated tables also if they don't order at all.
10. Yossi, as the manager, will have permissions for all actions provided by the system.
11. If an item was canceled - it will still be recorded in the system, but marked as "canceled" and the relevant employee will not perform any other action regarding this item.
12. If an item was modified - only it's newest status will be kept in the system.
13. All data will be saved automatically on a common DB (no local memory). This DB will be backed up only every certain amount of time, defined by the manager.
14. The term "order" is equivalent to the term "meal".
